

Now You Can Create Wood Heat Warmth and Ambiance Without the Inconvenience.

Interested in the Environment & want to do more to help reduce “carbon emissions” but don’t know where to start ? Achieve a personal contribution by cutting over 1 tonne of carbon emissions annually by using PSF ‘Carbon Neutral’ Wood Pellet Fuel & St.Croix Stoves for heating. Now there is a way you can enjoy the warmth and ambiance of a wood fire in a cleaner, more efficient manner. However, with the hectic lives we live, who has the time or circumstances to deal with wooden logs or handle the dust & dirt from traditional solid fuels ? Not to mention cleaning up the next day ! If you desire the look and warmth of a real wood fire, but don’t want the hassle, or if you want something more efficient, or would simply like a heating solution that pollutes less, then PSF pellet fuel & St.Croix stoves are perfect for you. Available in three basic models, there’s sure to be a St.Croix stove that meets your needs

Wood Pellet Fuel

Wood pellets are made from wood by-products reclaimed from saw mills and wood based manufacturing plants. Since pellets store neatly in 15kgs. bags, they require minimal storage space and they’re easier to transport. Most importantly, pellets burn cleaner ! When you burn wood pellets in your St.Croix stove you are using one of the cleanest, most economical home heating choices available. Since your St.Croix pellet stove maintains precise air-to-fuel ratios it burns hotter and cleaner. The result is minimal emissions into the atmosphere and **infrequent** stove cleaning.

The St. Croix Advantage - Even More Convenient

Simple Control Panel

Each St.Croix stove is designed with a convenient easy-to-understand control panel that makes heat output adjustment simple. When you turn up the dial the air ratio automatically rises with the heat. If you desire even more convenience, your St.Croix stove may be connected to an optional wall thermostat. When heat isn’t needed your stove will drop to its lowest heat setting. This will assure hours of unattended even heat.

Ever-Burn Grate System

Each St.Croix stove comes equipped with a self-cleaning grate system. This allows the stove to burn a wide variety of pellet fuels with minimum shutdown. All St.Croix models feature convenient ash drawers. With just a couple of tugs on the grate scraper, virtually any residual ash is dropped into the ash drawer. No other pellet stove can go so long between cleanings.

Insur-A-Lite Automatic Igniter System (Standard)

A pellet stove is very easy to light manually. However many consumers prefer being able to light their units at the push of a button. Our igniter system gives you a reliable automatic ignition system. Oh ! .. and it will also relight the stove after a power failure.

Now that’s convenience!

St. Croix

Other St. Croix Features

- Built in heat tube scraper - makes cleaning the heat exchanger a breeze.
- Large ceramic glass allows for safe, durable view of the fire.
- Quiet operating motors and fans - our research has found what we believe to be among the most reliable & quiet components available today.
- Optional Gold Plated Doors and Trims that won’t tarnish.
- Optional ceramic logs make viewing the fire even more realistic.

Afton Bay II
(Shown with black door)

AFTON BAY II

The Afton Bay II has the bay window look that is so popular today. It also features a full pedestal ash drawer and a 30 kg. max hopper capacity. Shown here with a black door. Optional gold door overlay and ceramic log set are available.
